

Compilation of qgis2.14.11

— — WIN10+VS2010+QT4

Wang Yiyi

1. Preparation work

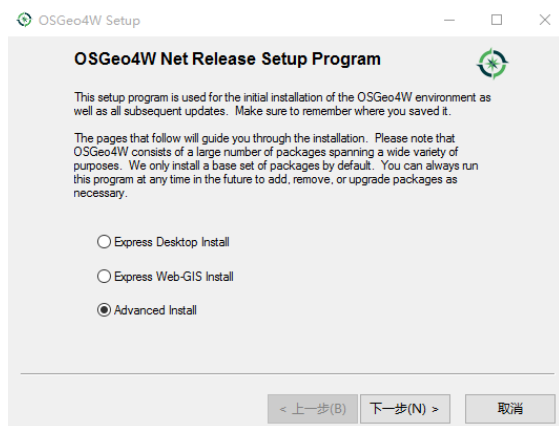

1. Download cmake-3.0.2, bison, flex (32bit);

2. Install VS2010;

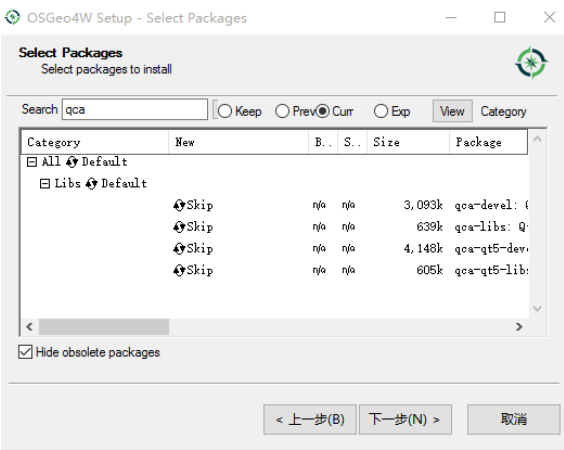

3. Download the following libraries in OSGeo4W (32bit):

- expat
- fcgi
- gdal
- grass
- gsl-devel
- iconv
- pyqt4
- qt4-devel
- qwt5-devel-qt4
- sip
- spatialite
- libspatialindex-devel
- python-qscintilla

(1) Select Advanced Install in the first step, and then default to the next step.

(2) Enter the above libraries into the search box respectively, select the file in the Libs directory, and click Skip

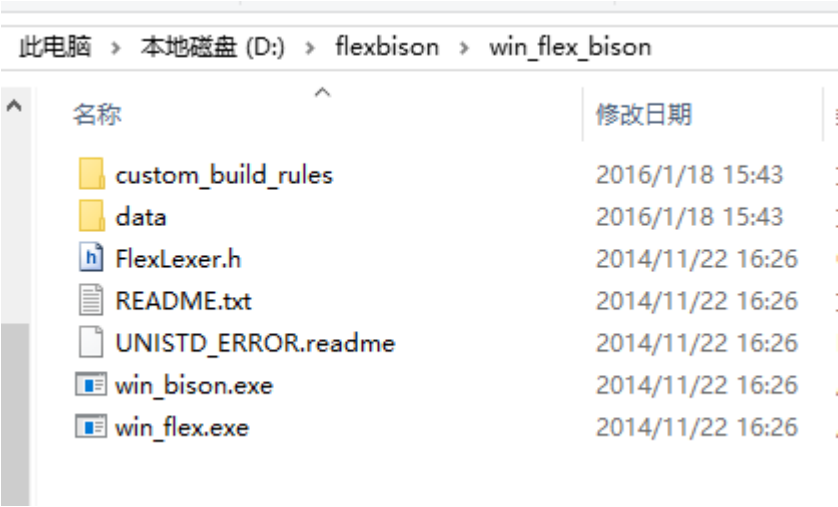

The qca library needs to be downloaded separately; qwt5-devel-qt4 cannot be directly searched due to the 32-bit OSGEO4W. Therefore I divide it into qwt, Search and download qt4 separately.

(3) After selecting everything, click Next and it will automatically download and install. After installation, just restart the computer.

(4) The downloading methods of bison and flex are the same.

4.qgis2.14.11 source code

Just download and unzip it from the official website

If you want to download the latest version of the source code, you can download git and click git bash and enter

the following command (take my computer as an example)

```
cdd
```

```
cd qgis2.14.11
```

```
mkdir qgis
```

```
cdqgis
```

```
git clone https://github.com/qgis/QGIS
```

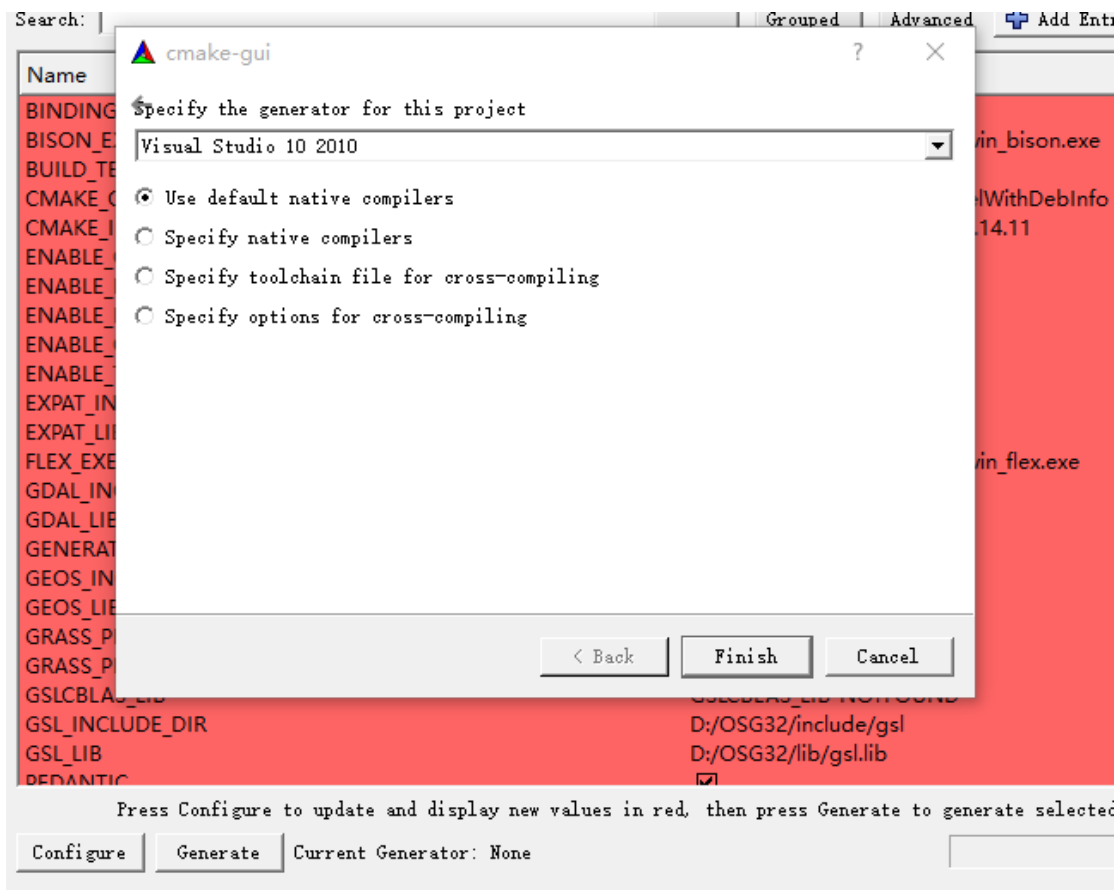

```
wyy1996@dell MINGW64 /d/qgis2.14.11/qgis (master)
$ git clone https://github.com/qgis/QGIS
Cloning into 'QGIS'...
remote: Counting objects: 515628, done.
remote: Compressing objects: 100% (20/20), done.
Receiving objects: 8% (41251/515628), 8.47 MiB | 1.12 MiB/s
```

2. CMAKE export project files

1. Select the source code folder and the folder to export the project

 CMake 3.0.2 - D:/qgis2.14.11/newbuild

File	Tools	Options	Help
Where is the source code: D:/qgis2.14.11/qgis-2.14.11			
Where to build the binaries: D:/qgis2.14.11/newbuild			

3. Click configure again and you will be prompted to set the paths of flex and bison.

4. Continuously configure and set the include and lib of each library (note that include must include the header file of the corresponding library)

5. When setting up python, you will be reminded that the version is too low, so you need to download a higher version of python from the official website.

6. After setting all paths, finally set SETUPAPI

SETUPAPI_LIBRARY	C:/Program Files (x86)/Microsoft SDKs/Windows/v7.0A/Lib/SetupAPI.Lib
SPATIALINDEX_INCLUDE_DIR	D:/OSG32/include/spatialindex

7. Click generate after configure done appears.

8. The following are the path settings for all dependent libraries and the selection of WITH option

BINDINGS_GLOBAL_INSTALL	<input type="checkbox"/>
BISON_EXECUTABLE	D:/flexbison/win_flex_bison/win_bison.exe
BUILD_TESTING	<input checked="" type="checkbox"/>
CMAKE_CONFIGURATION_TYPES	Debug;Release;MinSizeRel;RelWithDebInfo
CMAKE_INSTALL_PREFIX	C:/Program Files (x86)/qgis2.14.11
ENABLE_COVERAGE	<input type="checkbox"/>
ENABLE_MODELTEST	<input type="checkbox"/>

WITH_UNITY_BUILD	<input type="checkbox"/>

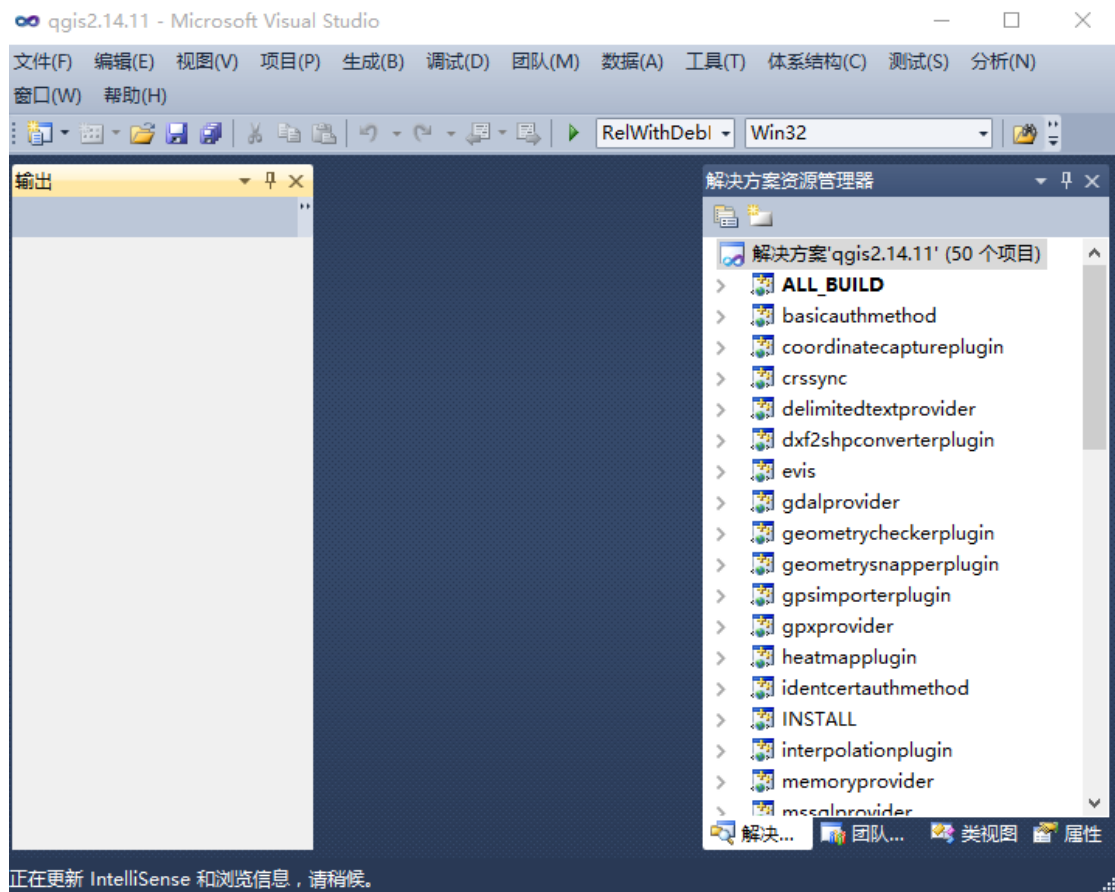

9. Find it in the newbuild directory after Generate done

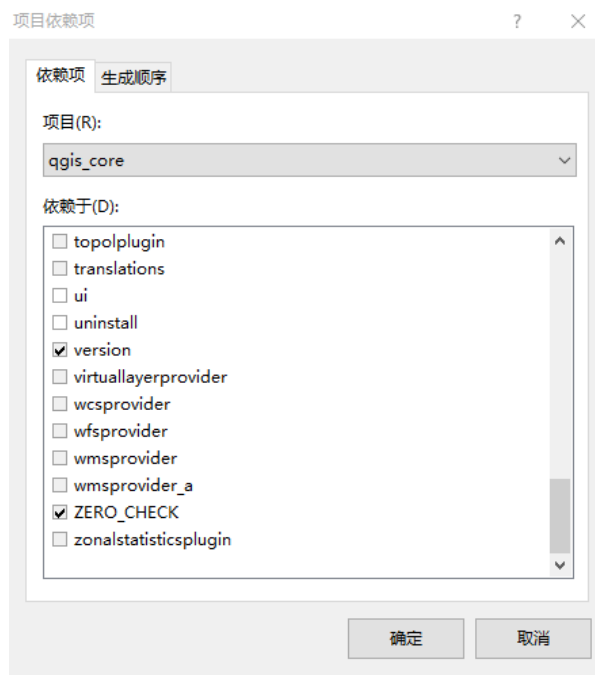

Open

3. VS2010 compilation

1. After opening the project file, as shown in the figure

2. Check the dependencies of each qgis project

3. Then generate the projects one by one in the following order

ZERO_CHECK

ui

version
qgis_core
qgis_gui
qgis_analysis
qgis_app
qgis
gdalprovider
ogrprovider

After everything is compiled, the relevant files will be generated in output/bin/RelWithDebInfo

	qgis.exe	2017/9/29 20
	qgis.ilc	2017/9/29 20
	qgis.pdb	2017/9/29 20
	qgis_analysis.dll	2017/9/29 19
	qgis_analysis.ilc	2017/9/29 19
	qgis_analysis.pdb	2017/9/29 19
	qgis_app.dll	2017/9/29 20
	qgis_app.ilc	2017/9/29 20
	qgis_app.pdb	2017/9/29 20
	qgis_core.dll	2017/9/29 19
	qgis_core.ilc	2017/9/29 19
	qgis_core.pdb	2017/9/29 19
	qgis_gui.dll	2017/9/29 19
	qgis_gui.ilc	2017/9/29 19
	qgis_gui.pdb	2017/9/29 19
	qgis_networkanalysis.dll	2017/10/1 14
	qgis_networkanalysis.pdb	2017/10/1 14

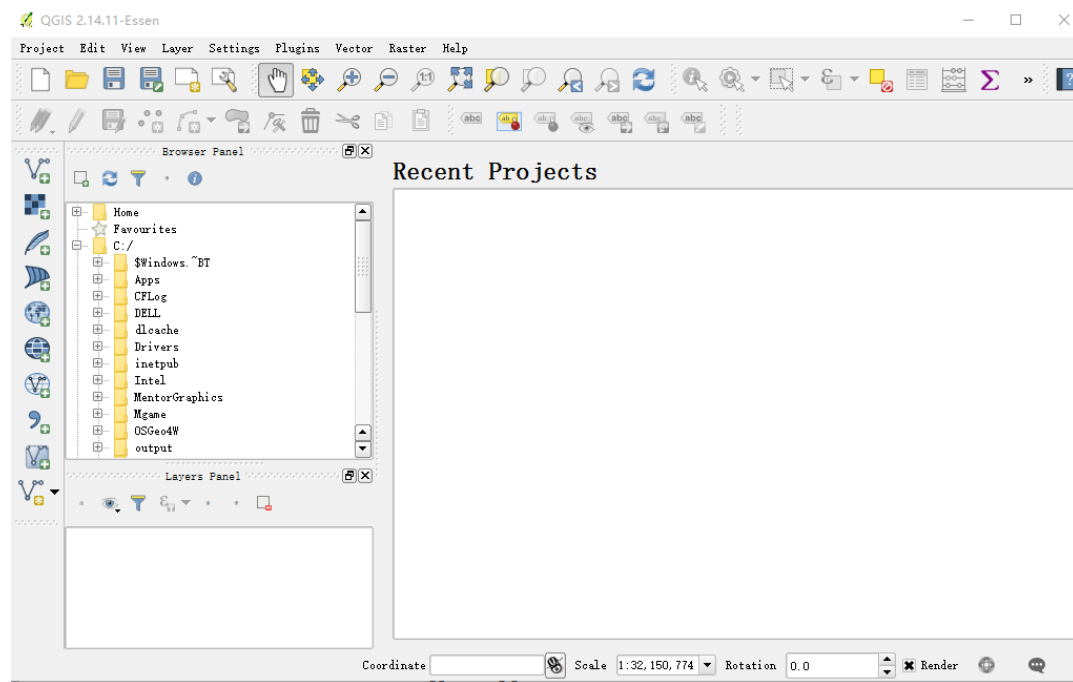

4. Compile other related projects as needed, which will be generated in output/plugins/RelWithDebInfo

swbuild > output > plugins > RelWithDebInfo			▼	🔍
名称	修改日期	类型		
	basicauthmethod.dll	2017/10/1 14:32	应用	
	basicauthmethod.ilc	2017/10/1 14:32	Incr	
	basicauthmethod.pdb	2017/10/1 14:32	Pro	
	coordinatecaptureplugin.dll	2017/10/1 14:32	应用	
	coordinatecaptureplugin.ilc	2017/10/1 14:32	Incr	
	coordinatecaptureplugin.pdb	2017/10/1 14:32	Pro	
	delimitedtextprovider.dll	2017/10/1 14:31	应用	
	delimitedtextprovider.ilc	2017/10/1 14:31	Incr	
	delimitedtextprovider.pdb	2017/10/1 14:31	Pro	
	dxf2shpconverterplugin.dll	2017/10/1 14:31	应用	
	dxf2shpconverterplugin.ilc	2017/10/1 14:31	Incr	
	dxf2shpconverterplugin.pdb	2017/10/1 14:31	Pro	

编辑系统变量

变量名(N):	<input type="text" value="PATH"/>
变量值(V):	<input type="text" value="d;D:\NODEJS\C:\Windows\System32;D:\OSG32\bin;"/>

6. Click qgis.exe to run

4. Errors encountered during QGIS compilation and solutions

1. Errors encountered in CMAKE:It's mainly an error in path setting. Just set the path to the library.

2. Errors encountered during VS2010 compilation:

(1) Appears when generating qgis_app:

LINK : fatal error LNK1104: Unable to open file "E:
\\newqgis\\Build\\output\\bin\\RelWithDebInfo\\qgis_app.dll"

reason:The qgis_app.dll that failed to compile last time has not been deleted. If you modify it and create it at the same time, an error will occur. **Solution:**Clean the project and rebuild

(2) Appears when generating qgis_core

error C2143: syntax error: missing ")" (before ";") error
C2001: newline character in constant

reason:Encoding issues.

Solution: Open the file with NOTEPAD++ and change the encoding to UTF-8 and save it.

error LNK2026: Module is not safe for SAFESEH images

Solution:

Open the command line page of the linker in the project property settings, set /SAFESEH:NO Type into the "Additional options" box and then
and click Apply.

fatal error C1083: Unable to open include file: "XXXX.h": No such file or directory **reason:**This header file
is not included in the include path settings folder in the CMAKE process. **Solution:**Modify the path to include
the header file and re-CMAKE.

(3) Appears when generating qgis_gui:

error LNK2019: Unresolved external symbol "__declspec(dllimport) public: __thiscall
QwtIntervalSample::QwtIntervalSample(class

QwtIntervalSample const &)" (__imp_??0QwtIntervalSample@@QAE@ABV0@@@Z), this symbol is in the
function "private: void __thiscall QVector<class QwtIntervalSample>::realloc(int,int)" (?realloc@?\$QVector
@VQwtIntervalSample@@@@AAEXHH@Z) is quoted in

reason:An additional QWT DLL has been added to the project configuration. **Solution:**Remove

QWT_DLL from preprocessor definition in project properties

error LNK2038: Mismatch detected for '_MSC_VER': value '1600' does not match value '1700'

reason:QT4 needs to be compiled by VS2010, and I use VS2012

Solution:Since it was originally compiled with VS2012, the platform toolset was changed from 2012 to 2010 in the project configuration.

3. Errors encountered after successful compilation:

After running QGIS.EXE, the application cannot start normally (0XC000007B) **reason:**There are multiple QT versions in the computer. After compiling with QT5's QMAKE, QT4 and QT5 DLLs are mixed.

Use 64-bit QT to compile 32-bit QGIS. Check the dependencies of the program through depends and find that some DLLs are 64-bit mismatches.

Solution:Change the QT version (I am using 32-bit QT4).

QGIS.EXE has stopped working after running QGIS.EXE.

reason:In VS2012, some projects are compiled with the 2010 platform toolset, and some are compiled with the 2012 toolset. **Solution:** All projects are compiled in VS2010

Some icons cannot be displayed after running QGIS.EXE

reason:qsvg4.dll not found

Solution:Copy the imageformats folder in ..\OSG32\apps\Qt4\plugins and drop it into the ..\qgis2.14.11\newbuild\output\bin\RelWithDebInfo folder.

"Authentication System: DISABLED. Resources authenticating via the system can not be accessed" appears after running QGIS.EXE

reason:The qca-openssl.dll of qca cannot be found.

Solution:Put the downloaded qca-openssl.dll (OpenSSL plugin for QCA) into the QT bin
